

DESIGN LICENSING CATALOG

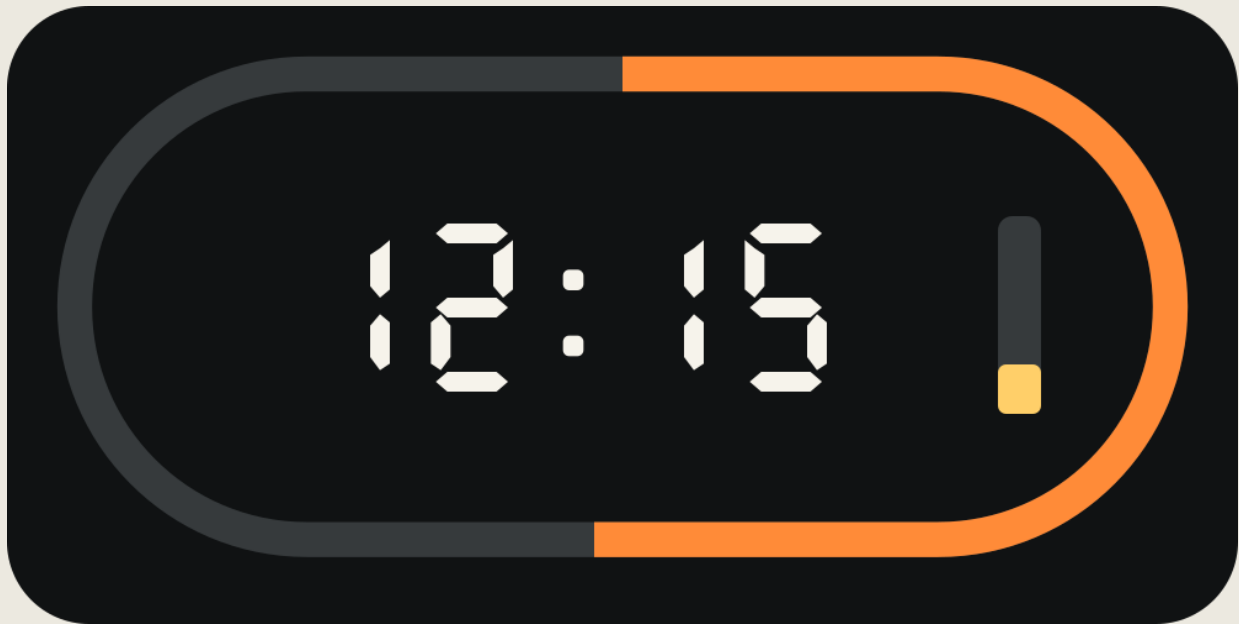

READ TIME. SEE ITS RHYTHM.

TIME STON-e.co presents clock interface designs that combine digital numerals with graphical progress. We invite businesses seeking a distinctive product design and user experience to discuss licensing and application possibilities.

Product application concept

How the interface works

12:15 / 51.04% + 25.00%

01 / NOW

The present moment

Digital hours and minutes retain the familiar way of reading an exact time.

02 / DAY

The passage of a day

The hour graph shows the elapsed share of a 24-hour day. Unfilled space represents what remains.

03 / MINUTE

The rhythm of an hour

The minute graph shows progress within the hour and resets at the next full hour.

Demo calculation: day graph = seconds since midnight / 86,400. Minute graph = seconds into the hour / 3,600. Unfilled space represents remaining time.

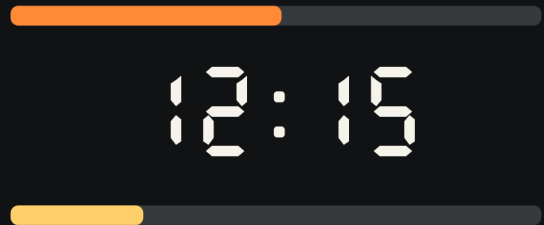

Hours + minutes collection

Hours + minutes / 6 applications

Product application directions

Product application concept

01 / WEARABLE

Presence on the wrist

An application direction for sports watches and wearable digital faces.

02 / AUTOMOTIVE

Time for the drive

An automotive display concept. Production integration requires separate readability and safety assessment.

03 / SPACES

Time in your surroundings

A graphic language for desk clocks, home displays and shared spaces.

Licensing conversations

A licensing contact point for product, design and business teams in wearables, automotive and digital products.

01 Define the application

Share your product category, markets and development schedule.

02 Explore the design

Review interface composition, skins and prototype scope.

03 Discuss the terms

Verify rights status, then discuss designs, territories, duration and commercial terms.
